

EPA COMPLIANCE CALENDAR

The recurring environmental deadlines most industrial and construction companies run into, in one place. Circle the ones that apply to you.

Every week	Hazardous waste	Inspect accumulation areas (small and large quantity generators).
Every month	SPCC	Inspect tanks, drums, and containment, as your plan requires. Log rainwater drained from containment.
Every 7 to 14 days	Construction stormwater	Inspect erosion and sediment controls as your permit requires, often every 7 days, or every 14 days and after a storm.
Every year	SPCC	Discharge prevention briefing for oil handling employees.
Every year	Hazardous waste	RCRA training for large quantity generator staff; small quantity generators keep staff familiar with procedures.
March 1, 2027	EPCRA Tier II	Report 2026 chemical inventories over threshold to your state, local planning committee, and fire department.
March 1, 2028	Biennial Report	Large quantity generators report 2027 hazardous waste activity.
July 1, 2027	TRI (Form R)	Covered facilities report 2026 toxic chemical releases.
Every 5 years	SPCC	Review and re-certify your SPCC plan, and update it within 6 months of any change that affects discharge potential.
Within 1 year of start	Universal waste	Ship out batteries, lamps, and mercury devices; label them with a start date.
10 working days before	Asbestos	Notify your state or EPA before any demolition, and before renovations that disturb regulated amounts.

Your permits come first. Wastewater, air, and stormwater permits set their own monitoring and report dates, and many states run these programs with stricter rules. Put every permit deadline on this calendar too.

Not sure which of these apply? Try our free EPA compliance check at foundationhsegroup.com, or book a free assessment. SPCC plans that need a Professional Engineer are certified through our licensed engineering partner.
